

## **Milestone 2 summary document**

### **New user stories added this milestone:**

1. Customer dashboard
2. Employee login
3. Customer upcoming bookings
4. Customer display today's schedule
5. Navigation bar

Not many user stories were added this milestone as we've added 14 user stories on the previous milestone, and we haven't managed to implement all those user stories yet, these 5 user stories are just minor additions which we have missed out on the previous milestone.

### **New code**

For this milestone we have implemented the functions for the following user stories

1. Customer login
2. Admin login
3. Employee login
4. Customer register account
5. Customer dashboard (Frontend only)
6. Customer edit information
7. Customer upcoming bookings (Frontend only)
8. Customer display today's schedule (Frontend only)
9. Navigation Bar

Both frontend and backend functions for most of the user stories have been successfully implemented for the above user stories.

### **New tests**

Unit tests for the above user stories have also been implemented, the evidence can be found in the Unit Test documentation pdf file.

### **New functionality**

We have successfully integrated the functions implemented above, which means now on our React App webpage we can:

1. Register a customer account
2. Login with your customer credentials
3. View your customer dashboard
4. Edit your customer information
5. Login with admin/employee credentials
6. Navigation bar

## AWS and CricleCI

We have implemented an AWS database for our project and also CircleCI, unfortunately we have not managed to fully test out if our CircleCI is working as there are not enough credits and it does not run our build

DB identifier sean-database1	CPU <div><div></div></div> 2.17%	Info Available	Class db.t2.micro
Role Instance	Current activity <div><div></div></div> 10 Connections	Engine MySQL Community	Region & AZ ap-southeast-2b
